DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 7/21/06 has been entered.

Claim Objections

2. Claim 18 is objected to because of the following informalities: "a carrier supporting the catalyst particle" is written twice in claim 18. Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 17, 18, 21, 22 are rejected under 35 U.S.C. 102(e) as being anticipated by Yamada et al., U.S. Pat. No. 6,805,985 B2.

Yamada et al., teach an electrode for a fuel cell comprising a catalyst layer including an ion-exchange resin and a proton-conducting substance, wherein the proton-conducting substance is a fullerene derivative including an electron-withdrawing group (col. 1, lines 60-67 and col. 2, lines 1-14). It teaches an electrode for a fuel cell comprising a catalyst layer comprising catalyst particle, carrier supporting catalyst, ion-exchange resin, and a proton-conducting substance (col. 5, lines 34-51); and a conductive porous substrate supporting catalyst layer (col. 6, lines 41-46), wherein proton-conducting substance is a fullerene derivative including an electron-withdrawing group (col. 6, lines 46-67 and col. 7, lines 1-3). It teaches a fuel cell comprising an electrode in a fuel-feeding side, an electrode in an oxygen-feeding side, and a solid electrolyte membrane between the electrodes, wherein the electrode in oxygen-feeding side is the electrode for fuel cell of claim 17 (col. 1, lines 60-67 and col. 2, lines 1-14); or is an electrode for fuel cell of claim 18 (col. 5, lines 34-5; col. 6, lines 41-67).

Thus, the claims are anticipated.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Murphy et al., U.S. Pat. No. 6,448,412 B1, teach fullerene derivatives.
